AN ORDINANCE AMENDING CHAPTER 1337 OF THE CODIFIED ORDINANCES OF THE CITY OF KENT, ENTITLED "FLOOD DAMAGE CONTROL", IN ORDER TO COMPLY WITH THE NEW FEMA REGULATIONS FOR SPECIAL FLOOD HAZARD AREAS.

WHEREAS, FEMA has established new guidelines for special flood hazard areas; and

WHEREAS, Article XVIII, Section 3, of the Ohio Constitution grants municipalities the legal authority to adopt land use and control measures for promoting the health, safety, and general welfare of its citizens; and

WHEREAS, the City of Kent has special flood hazard areas that are subject to periodic inundation which may result in loss of life and property, health, and safety hazards, disruption of commerce and governmental services, extraordinary public expenditures for flood protection and relief, and impairment of the tax base. Additionally, structures that are inadequately elevated, flood proofed, or otherwise protected from flood damage also contribute to the flood loss. In order to minimize the threat of such damages and to achieve the purposes hereinafter set forth, these regulations are proposed; and

WHEREAS, it is the purpose of these regulations to promote the public health, safety and general welfare, and to:

a) Protect human life and health;
b) Minimize expenditure of public money for costly flood control project;
c) Minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;
d) Minimize prolonged business interruptions;
e) minimize damage to public facilities and utilities such as water and gas mains, electric, telephone and sewer lines, streets, and bridges located in areas of special flood hazard;
f) Help maintain a stable tax base by providing for the proper use and development of areas of special flood hazard so as to protect property and minimize future flood blight areas.
g) Ensure that those who occupy the areas of special flood hazard assume responsibility for their actions;
h) Minimize the impact of development on adjacent properties within and near flood prone areas;
i) Ensure that the flood storage and conveyance functions of the floodplain are maintained;
j) Minimize the impact of development on the natural, beneficial values of the floodplain;
k) Prevent floodplain uses that are either hazardous or environmentally incompatible; and
l) Meet community participation requirements of the National Flood Insurance Program.

NOW, THEREFORE, BE IT ORDAINED by the Council of the City of Kent, Portage County, Ohio, at least a majority (5) of all members elected thereto concurring:
SECTION 1. That Council does hereby amend Chapter 1337 of the Codified Ordinances of the City of Kent entitled "Flood Damage Control" as shown on Exhibit "A", attached hereto and made a part hereof.

SECTION 2. That it is found and determined that all formal actions of this Council concerning and relating to the adoption of this ordinance were adopted in an open meeting of this Council and that all deliberations of this Council, and of any of its committees that resulted in such formal action, were in meetings open to the public in compliance with all legal requirements of Section 121.22 of the Ohio Revised Code.

SECTION 3. That this Ordinance shall take effect and be in force from and after the earliest date allowed by law.

PASSED: 06/17/2009
DATE
MAYOR AND PRESIDENT OF COUNCIL

ATTEST: CLERK OF COUNCIL

I hereby certify that Ordinance No. 2009-60 was duly enacted this 17 day of June, 2009, by the Council of the City of Kent, Ohio

CLERK OF COUNCIL
**EXHIBIT “A”**

**Flood Damage Control**

**1337.01 STATUTORY AUTHORIZATIONS FINDINGS OF FACT; PURPOSE AND OBJECTIVES. GENERAL PROVISIONS**

(a) **Statutory Authorization.** Article XVIII, Section 3, of the Ohio Constitution grants municipalities the legal authority to adopt land use and control measures for promoting the health, safety and general welfare of its residents. Therefore, City Council of Kent, State of Ohio, does ordain as follows:

(b) **Findings of Fact.**

(1) The flood hazard areas of Kent, Ohio are subject to periodic inundation which may result in loss of life and property, health and safety hazards, disruption of commerce and governmental services, extraordinary public expenditures for flood protection and relief, and impairment of the tax base all of which adversely affect the public health, safety and general welfare. Additionally, structures that are inadequately elevated, floodproofed, or otherwise protected from flood damage also contribute to the flood loss. In order to minimize that threat of such damages and to achieve the purposes hereinafter set forth, these regulations are adopted.

(2) These flood losses are caused by the cumulative effect of obstructions in areas of special flood hazards which increase flood heights and velocities and when inadequately anchored, damage uses in other areas. Uses that are inadequately floodproofed, elevated or otherwise protected from flood damage also contribute to the flood loss.

(c) **Statement of Purpose.** It is the purpose of this chapter these regulations to promote the public health, safety and general welfare, and to minimize public and private losses due to flood conditions in specific areas by provisions designed to:
(1) Protect human life and health;
(2) Minimize expenditure of public money for costly flood control projects;
(3) Minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;
(4) Minimize prolonged business interruptions;
(5) Minimize damage to public facilities and utilities such as water and gas mains, electric, telephone and sewer lines, streets and bridges located in areas of special flood hazard;
(6) Help maintain a stable tax base by providing for the proper use and development of areas of special flood hazard so as to protect property and minimize future flood blight areas;
(7) Ensure that those who occupy the areas of special flood hazard assume responsibility for their action.
(8) Minimize the impact of development on adjacent properties within the and near flood prone areas;
(9) Ensure that the flood storage an conveyance functions of the floodplain are maintained;
(10) Minimize the impact of development on the natural, beneficial values of the floodplain;
(11) Prevent floodplain uses that are either hazardous or environmentally incompatible; and
(12) Meet community participation requirements of the National Flood Insurance Program.

(d) Methods of Reducing Flood Losses. In order to accomplish its purposes, this chapter these regulations includes methods and provisions for:
(1) Restricting or prohibiting uses which are dangerous to health, safety and property due to water hazards, or which result in damaging increases in flood heights or velocities;
(2) Requiring that uses vulnerable to floods, including facilities, which serve such uses, be protected against flood damage at the time of initial construction;
(3) Controlling the alteration of natural flood plains, stream channels and natural protective barriers, which help accommodate or channel flood waters;
(4) Controlling filling, grading, dredging and other development which may increase flood damage; and
(5) Preventing or regulating the construction of flood barriers, which will unnaturally divert flood waters, or which may increase flood hazards in other areas. (Ord. 87-38. Passed 5-20-87.)

(e) Lands to Which These Regulations Apply
These regulations shall apply to all areas of the special flood hazard within the jurisdiction of the City of Kent as identified in section 1337.01(f), including any additional areas of special flood hazard annexed by City of Kent.

(f) Basis for Establishing the Areas of Special Flood Hazard
For the purposes of these regulations, the following studies and / or maps are adopted:
(1) Flood Insurance Study Portage County, Ohio and Incorporated Areas and Flood Insurance Rate Map Portage County, Ohio and Incorporated Areas both effective August 18, 2009.
(2) Other studies and / or maps, which may be relied upon for establishment of the flood protection elevation, delineation of the 100-year floodplain, floodways or delineation of
other areas of special flood hazard.

(3) Any hydrologic and hydraulic engineering analysis authored by a registered Professional Engineer in the State of Ohio which has been approved by the City of Kent as required by Section 1337.04(c) Subdivisions and Large Scale Developments.

Any revisions to the aforementioned maps and/or studies are hereby adopted by reference and declared to be a part of these regulations. Such maps and/or studies are on file at the Service Administration Complex at 930 Overholt Road Kent, Ohio.

(g) Abrogation and greater Restrictions

These regulations are not intended to repeal any existing ordinances including subdivision regulations, zoning or building codes. In the event of a conflict between these regulations and any other ordinance, the more restrictive shall be followed. These regulations shall not impair any deed restriction covenant or easement but the land subject to such interests shall also be governed by the regulations.

(h) Interpretation

In the interpretation and application of these regulations, all provisions shall be:

(1) Considered as minimum requirements;
(2) Liberally construed in favor of the governing body; and,
(3) Deemed neither to limit nor repeal any other powers granted under state statutes. Where a provision of these regulations may be in conflict with a state or Federal law, such state or Federal law shall take precedence over these regulations.

(i) Warning and Disclaimer of Liability

The degree of flood protection required by these regulations is considered reasonable for regulatory purposes and is based on scientific and engineering considerations. Larger floods can and will occur on rare occasions. Flood heights may be increased by man-made or natural causes. These regulations do not imply that land outside the areas of special flood hazard or uses permitted within such areas will be free from flooding or flood damage. These regulations shall not create liability on the part of the City of Kent, any officer or employee thereof, or the Federal Emergency Management Agency, for any flood damage that results from reliance on these regulations or any administrative decision lawfully made thereunder.

(j) Severability

Should any section or provision of these regulations be declared by the courts to be unconstitutional or invalid, such decision shall not affect the validity of the regulations as a whole, or any part thereof other than the part so declared to be unconstitutional or invalid.

1337.02 DEFINITIONS

Unless specifically defined below, words or phrases used in this chapter shall be interpreted so as to give them the meaning they have in common usage and to give this chapter its these regulations the most reasonable application.

(a) "Accessory structure" means a structure on the same lot with and of a nature customarily incidental and subordinate to, the principal structure.

(b) "Appeal" means a request for a review of the Building Official’s floodplain administrator’s interpretation of any provision of this chapter these regulations or a request for a variance.

(c) "Area of special flood hazard" means the land in the floodplain within a community subject to a one percent (1%) or greater chance of flooding in any given year. Areas of special flood
hazard are designated by the Federal Emergency Management Agency as Zone A, AK, AH, AO, A1-30, and A99.

(c) "Base flood" means the flood having a one percent (1%) chance of being equaled or exceeded in any given year. The base flood may also be referred to as the 1% chance annual flood or one hundred (100) year flood.

(d) “Base (100-Year) Flood Elevation (BFE)” means the water surface elevation of the base flood in relation to a specific datum, usually the National Geodetic Vertical Datum of 1929 or the North American Vertical Datum of 1988, and usually expressed in Feet Mean Sea Level (MSL). In Zone AO areas, the base flood elevation is the natural grade elevation plus the depth number (from 1 to 3 feet).

(e) "Basement" means any area of the building having its floor subgrade (below ground level) on all sides.

(f) "Development" means any man-made change to improved or unimproved real estate, including but not limited to buildings or other structures, mining, dredging, filling, grading, paving, excavation or drilling operations or storage of equipment or materials located within the area of special flood hazard.

(g) “Enclosure Below the Lowest Floor” see “Lowest Floor”.

(h) “Executive Order 11988 (Floodplain Management)” means Issued by President Carter in 1977, this order requires that no federally assisted activities be conducted in or have the potential to affect identified special flood hazard areas, unless there is no practicable alternative.

(i) "Federal Emergency Management Agency” (FEMA) means the agency with the overall responsibility for administering the National Flood Insurance Program.

(j) “Fill” means a deposit of earth material (natural earth materials such as rock, soil, sand, gravel, etc.) placed by artificial means.

(k) "Flood" or "flooding" means a general and temporary condition of partial or complete inundation of normally dry land areas from:

1. The overflow of inland or tidal waters, and/or
2. The unusual and rapid accumulation or runoff of surface waters from any source.

(l) “Flood Hazard Boundary Map (FHBM)” means the initial map, usually produced by the Federal Emergency Management Agency, or U.S. Department of Housing and Urban Development, for a community depicting approximate special flood hazard areas.

(m) "Flood Insurance Rate Map" (FIRM) means an official map on which the Federal Emergency Management Agency or the U.S. Department of Housing and Urban Development has delineated the areas of special flood hazard.

(n) “Flood Insurance Risk Zones” means the zone designations on FHBM and FIRMs that indicate the magnitude of the flood hazard in specific areas of a community. Following are the zone definitions:

1. Zone A: Special flood hazard areas inundated by the 100-year flood; base flood elevations are not determined.
2. Zones A1-30 and Zone AE: Special flood hazard areas inundated by the 100-year flood; base flood elevations are determined.
3. Zone AO: Special flood hazard areas inundated by the 100-year flood; with flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths are determined.
4. Zone AH: Special flood hazard areas inundated by the 100-year flood; flood depths of 1 to 3 feet (usually areas of ponding); base flood elevations are determined.
5. Zone A99: Special flood hazard areas inundated by the 100-year flood to be protected from the 100-year flood by a Federal flood protection system under construction; no base flood elevations are determined.
Zone B and Zone X (shaded): Areas of 500-year flood; areas subject to the 100-year flood with average depths of less than 1 foot or with contributing drainage area less than 1 square mile; and areas protected by levees from the base flood.

Zone C and Zone X (unshaded): Areas determined to be outside the 500-year floodplain.

"Flood Insurance Study" means the official report in which the Federal Emergency Management Agency or the U.S. Department of Housing and Urban Development has provided flood profiles, floodway boundaries (sometimes shown on Flood Boundary and Floodway Maps), and the water surface elevations of the base flood.

"Flood Protection Elevation (PFE)" means the base flood elevation. In areas where no base flood elevations exist from any authoritative source, the flood protection elevation can be historical flood elevations, or base flood elevations determined and/or approved by the floodplain administrator.

"Floodway" means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood discharge without cumulatively increasing the water surface elevation more than .5 foot. A floodway is typically determined through a hydraulic and hydrologic engineering analysis such that the cumulative increase in the water surface elevation of the base flood discharge is no more than a designated height. In no case shall the designated height be more than one foot at any point within the community.

The floodway is an extremely hazardous area, and is usually characterized by any of the following: Moderate to high velocity flood waters, high potential for debris and projectile impacts, and moderate to high erosion forces.

"Freeboard" means a factor of safety usually expressed in feet above a flood level for the purposes of floodplain management. Freeboard tends to compensate for the many unknown factors that could contribute to flood heights greater than the height calculated for a selected size flood and floodway conditions, such as wave action, obstructed bridge openings, debris and ice jams, and the hydrologic effect of urbanization in a watershed.

Historic Structure" means any structure that is:

1. Listed individually in the National Register of Historic Places (a listing maintained by the U.S. Department of Interior) or preliminarily determined by the Secretary of the Interior as meeting the requirements for individual listings on the National Register;

2. Certified or preliminarily determined by the Secretary of the Interior as contributing to the historical significance of a registered historic district or a district preliminarily determined by the Secretary to qualify as a registered historic district;

3. Individually listed on a state of Ohio’s inventory of historic places maintained by the Ohio Historic Preservation Office; or in states with historic preservation programs which have been approved by the Secretary of the Interior; or

4. Individually listed on a local inventory of historic places maintained by City of Kent’s historic preservation program, which program is certified by the Ohio Historic Preservation Office in communities with historic preservation programs that have been certified either:

   A. By an approved state program as determined by the Secretary of the Interior

   B. Directly by the Secretary of the Interior in states without approved programs.

"Hydrologic and hydraulic engineering analysis" means an analysis performed by a professional engineer, registered in the State of Ohio, in accordance with standard engineering practices as
accepted by FEMA, used to determine flood elevations and/or floodway boundaries.

“Letter of Map Change (LOMC)” means an official FEMA determination, by letter, to amend or revise effective Flood Insurance Rate Maps, Flood Boundary and Floodway Maps, and Flood Insurance Studies. LOMCs are broken down into the following categories:

1. **Letter of Map Amendment (LOMA)** A revision based on technical data showing that a property was incorrectly included in a designated special flood hazard area. A LOMA amends the current effective Flood Insurance Rate Map and establishes that a specific property is not located in a special flood hazard area.

2. **Letter of Map Revision (LOMR)** A revision based on technical data that, usually due to manmade changes, shows changes to flood zones, flood elevations, floodplain and floodway delineations, and planimetric features. One common type of LOMR, a LOMR-F, is a determination concerning whether a structure or parcel has been elevated by fill above the base flood elevation and is, therefore, excluded from the special flood hazard area.

3. **Conditional Letter of Map Revision (CLOMR)** A formal review and comment by FEMA as to whether a proposed project complies with the minimum National Flood Insurance Program floodplain management criteria. A CLOMR does not amend or revise effective Flood Insurance Rate Maps, Flood Boundary and Floodway Maps, or Flood Insurance Studies.

(m) "Lowest floor" means the lowest floor of the lowest enclosed area (including basement) of a structure. This definition excludes an “enclosure below the lowest floor” which is an unfinished or flood resistant enclosure, usable solely for parking of vehicles, building access or storage in an area other than a basement area, is not considered a building’s lowest floor; provided that such enclosure is built in accordance with the applicable design requirements specified in this ordinance these regulations for enclosures below the lowest floor.

(n) "Manufactured home" means a structure, transportable in one or more sections, which is built on a permanent chassis and is designed for use with or without a permanent foundation when connected to the required utilities. The term "manufactured home" does not include a "recreational vehicle." For the purposes of these regulations, a manufactured home includes manufactured homes and mobile homes as defined in Chapter 3733 of the Ohio Revised Code.

(o) "Manufactured home park or subdivision" As specified in the Ohio Administrative Code 3701-27-01, means a parcel (or contiguous parcels) any tract of land upon which three or more manufactured homes, used for habitation are parked, either free of charge or for revenue purposes, and includes any roadway, building, structure, vehicle, or enclosure used or intended for use as part of the facilities of the park. A tract of land that is subdivided and the individual lots are not for rent or rented, but are for sale or sold for the purpose of installation of manufactured homes on the lots, is not a manufactured home park, even though three or more manufactured homes are parked thereon, if the roadways are dedicated to the local government authority, divided into two or more manufactured home lots for rent or sale. This definition shall exclude any manufactured home park as defined in Ohio R.C. 3733.01 over which the Public Health Council has exclusive rule making power.
“National Flood Insurance Program (NFIP)” means a Federal program enabling property owners in participating communities to purchase insurance protection against losses from flooding. This insurance is designed to provide an insurance alternative to disaster assistance to meet the escalating costs of repairing damage to buildings and their contents caused by floods. Participation in the NFIP is based on an agreement between local communities and the Federal government that states if a community will adopt and enforce floodplain management regulations to reduce future flood risks to all development in special flood hazard areas, the Federal government will make flood insurance available within the community as a financial protection against flood loss.

"New construction" means structures for which the "start of construction" commenced on or after the effective date of the City of Kent's Flood Insurance Rate Map, March 15, 1978, and includes any subsequent improvements to such structure.

“Person” includes any individual or group of individuals, corporation, partnership, association, or any other entity, including state and local governments and agencies. An agency is further defined in the Ohio Revised Code Section 111.15 as any governmental entity of the state and includes, but is not limited to, any board, department, division, commission, bureau, society, council, institution, state college or university; community college district, technical college district, or state community college. “Agency” does not include the general assembly, the controlling board, the adjutant general’s department, or any court.

"Recreational vehicle" means a vehicle which is (1) built on a single chassis, (2) 400 square feet or less when measured at the largest horizontal projection, (3) designed to be self-propelled or permanently towable by a light duty truck, and (4) designed primarily not for use as a permanent dwelling but as temporary living quarters for recreational, camping, travel or seasonal use.

“Registered Professional Architect” means a person registered to engage in the practice of architecture under the provisions of sections 4703.01 to 4703.19 of the Revised Code.

“Registered Professional Engineer” means a person registered as a professional engineer under Chapter 4733 of the Revised Code.

“Registered Professional Surveyor” means a person registered as a professional surveyor under Chapter 4733 of the Revised Code.

“Special Flood Hazard Area” also known as “Areas of Special Flood Hazard”, means the land in the floodplain subject to a one percent or greater chance of flooding in any given year. Special flood hazard areas are designated by the Federal Emergency Management Agency on Flood Insurance Rate Maps, Flood Insurance Studies, Flood Boundary and Floodway Maps and Flood Hazard Boundary Maps as Zones A, AE, AH, AO, A1-30, and A99. Special flood hazard areas may also refer to areas that are flood prone and designated from other federal state or local sources of data including but not limited to historical flood information reflecting high water marks, previous flood inundation areas, and flood prone soils associated with a watercourse.

"Start of construction" means the date the building permit was issued, provided the actual start of construction, repair, reconstruction, rehabilitation, addition, placement or other improvement was within 180 days of the permit date. The actual start which differs from the start of construction means either the first placement of permanent construction of a structure on a site, such as the pouring of slabs or footings, the installation of piles, the construction of columns or any work beyond the state of excavation; or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading and filling; nor does it include the installation of
streets and/or walkways; nor does it include the excavation for a basement, footings, piers or foundations or the erection of temporary forms; nor does it include the installation on the property of accessory buildings such as garages or sheds not occupied as dwelling units or not part of the main structure. For a substantial improvement, the actual start of construction means the first alteration of any wall, ceiling, floor or other structural part of a building, whether or not that alteration affects the external dimensions of a building.

(hh) "Structure" means a walled and roofed building, manufactured home or gas or liquid storage tank that is principally above ground.

(ii) "Substantial damage" means damage of any origin sustained by a structure whereby the cost of restoring the structure to its before damaged condition would equal or exceed 50 percent (50%) of the market value of the structure before the damage occurred.

(ii) "Substantial improvement" means any repair, reconstruction, rehabilitation, addition or other improvement of a structure, the cost of which equals or exceeds fifty percent (50%) of the market value of the structure either before the improvement or repair is started, or if the structure has been damaged and is being restored, before the damage occurred the "start of construction" of the improvement. This term includes structures which have incurred "substantial damage," regardless of the actual repair work performed. The term does not, however, include:

1. Any improvement to a structure that is considered “new construction,”
2. Any project for improvement of a structure to correct existing violations of state or local health, sanitary or safety code specifications which have been identified prior to the application for a development permit by the local code enforcement official and which are the minimum necessary to assure safe living conditions; or
3. Any alteration of a "historic structure," provided that the alteration will not preclude the structure's continued designation as a "historic structure"; or,
4. Any improvement to a structure which is considered new construction.

(kk) "Variance" means a grant of relief from the requirements of this chapter standards of these regulations consistent with the variance conditions herein.

(l) "Violation" means the failure of a structure or other development to be fully compliant with these regulations.
1337.03. GENERAL PROVISIONS.

(a) Lands to Which this Chapter Applies. This chapter shall apply to all areas of special flood hazard within the jurisdiction of the City of Kent as identified by the Federal Emergency Management Agency, including any additional flood hazard areas annexed by the City of Kent that are not identified on the effective Flood Insurance Rate Map.

(b) Basis for Establishing the Areas of Special Flood Hazard. The areas of special flood hazard have been identified by the Federal Emergency Management Agency in a scientific and engineering report entitled "Flood Insurance Study for the City of Kent". This study with accompanying Flood Boundary and Floodway Maps and/or Flood Insurance Rate Maps dated March 15, 1978, and any revisions thereto is hereby adopted by reference and declared to be a part of this chapter. The Flood Insurance Study is on file at Kent City Hall, 325 South Depeyster Street, Kent, Ohio 44240.

(c) Compliance. Unless specifically exempted from filing for a development permit as stated in Section 1337.04 (b) no structure or land shall hereafter be located, erected, constructed, repaired, extended, converted, enlarged or altered without full compliance with the terms of this chapter and all other applicable regulations which apply to uses within the jurisdiction of this chapter.

(d) Abrogation and Greater Restrictions. This chapter is not intended to repeal, abrogate or impair any existing easements, covenants or deed restrictions. However where this chapter and another chapter, easement, covenant or deed restriction conflict or overlap whichever imposes the more stringent restrictions shall prevail.

(e) Interpretation. In the interpretation and application of this chapter, all provisions shall be:

1. Considered as minimum requirements;
2. Liberally construed in favor of the governing body; and
3. Deemed neither to limit nor repeal any other powers granted under State statutes.

Where a provision of this chapter may be in conflict with a State law, such State law shall take precedence over the chapter.

(f) Warning and Disclaimer of Liability. The degree of flood protection required by this chapter is considered reasonable for regulatory purposes and is based on scientific and engineering considerations. Larger floods can and will occur on rare occasions. Flood heights may be increased by man-made or natural causes. This chapter does not imply that land outside the areas of special flood hazards or uses permitted within such areas will be free from flooding or flood damages. This chapter shall not create liability on the part of the City, any officer or employee thereof or the Federal Emergency Management Agency, for any flood damages that result from reliance on this chapter or any administrative decision lawfully made thereunder. (Ord. 1998-03. Passed 1-21-98)

1337.04.03. ADMINISTRATION.

(a) Designation of the Floodplain Administrator. The Chief Building Official is hereby appointed to administer and implement these regulations and is referred to herein as the Floodplain Administrator.

(b) Duties and Responsibilities of the Floodplain Administrator. The duties and responsibilities of the Floodplain Administrator shall include but are not limited to:

1. Evaluate applications for permits to develop in special flood hazard areas.
2. Interpret floodplain boundaries and provide flood hazard and flood protection elevation information.
3. Issue permits to develop in special flood hazard areas when the provisions of these regulations have been met, or refuse to issue the same in the event of noncompliance.
(4) Inspect buildings and lands to determine whether any violations of these regulations have been committed.

(5) Make and permanently keep all records for public inspection necessary for the administration of these regulations including Flood Insurance Rate Maps, Letters of Map Amendment and Revision, records of issuance and denial of permits to develop in special flood hazard areas, determinations of whether development is in or out of special flood hazard areas for the purpose of issuing floodplain development permits, elevation certificates, variances, and records of enforcement actions taken for violations of these regulations.

(6) Enforce the provisions of these regulations.

(7) Provide information, testimony, or other evidence as needed during variance hearings.

(8) Coordinate map maintenance activities and FEMA follow-up.

(9) Conduct substantial damage determinations to determine whether existing structures, damaged from any source and in special flood hazard areas identified by FEMA, must meet the development standards of these regulations.

(c) Establishment of Development Permit. A development permit shall be obtained before construction or development begins within any area of special flood hazard established in Section 1337.03(b). Floodplain Development Permits. It shall be unlawful for any person to begin construction or other development activity including but not limited to filling; grading; construction; alteration, remodeling, or expanding any structure; or alteration of any watercourse wholly within, partially within or in contact with any identified special flood hazard area, as established in Section 1337.01(f), until a floodplain development permit is obtained from the Floodplain Administrator. Such floodplain development permit shall show that the proposed development activity is in conformity with the provisions of these regulations. No such permit shall be issued by the Floodplain Administrator until the requirements of these regulations have been met.

(d) Application Required. An application for a floodplain development permit shall be made on forms furnished by the Building Official and may include, but not be limited to: site specific topographic plans in duplicate drawn to scale showing the nature, location or dimensions and elevations of the area in question; existing or proposed structures, fill, storage of materials, drainage facilities and the location of the foregoing. Specifically the following information is required for all development activities located wholly within, partially within, or in contact with an identified special flood hazard area. Such application shall be made by the owner of the property or his/her authorized agent, herein referred to as the applicant, prior to the actual commencement of such construction on a form furnished for that purpose. Where it is unclear whether a development site is in a special flood hazard area, the Floodplain Administrator may require an application for a floodplain development permit to determine the development’s location. Such applications shall include, but not be limited to,
(1) Elevation in relation to mean sea level of the lowest floor, including basement, of all proposed structures located in special flood hazard areas where base flood elevation data are utilized;

(2) Elevation in relation to mean sea level to which any proposed structure will be floodproofed in accordance with Section 1337.05(b)(2) where base flood elevation data are utilized;

(3) Certification by a registered professional engineer or architect that the floodproofing methods for any nonresidential structure meet the floodproofing criteria in Section 1337.05(b)(2) where base flood elevation data are utilized; and

(4) Description of the extent to which any watercourse will be altered or relocated as a result of proposed development and certification by a registered professional engineer that the flood carrying capacity of the watercourse will not be diminished.

(1) Site plans drawn to scale showing the nature, location, dimensions, and topography of the area in question; the location of existing or proposed structures, fill, storage of materials, drainage facilities, and the location of the foregoing.

(2) Elevation of the existing, natural ground where structures are proposed.

(3) Elevation of the lowest floor, including basement, of all proposed structures.

(4) Such other material and information as may be requested by the Floodplain Administrator to determine conformance with, and provide enforcement of these regulations.

(5) Technical analyses conducted by the appropriate design professional registered in the State of Ohio and submitted with an application for a floodplain development permit when applicable:

A) Floodproofing certification for non-residential floodproofed structure as required in Section 1337.04(e).

B) Certification that fully enclosed areas below the lowest floor of a structure not meeting the design requirements of Section 1137.04(d)(5) are designed to automatically equalize hydrostatic flood forces.

C) Description of the extent to which any watercourse alteration or relocation will be altered or relocated as a result of proposed development and certification by a registered professional engineer that the flood carrying capacity of the watercourse will not be diminished, and maintenance assurances as required in Section 1137.04(i)(3).

D) A hydrologic and hydraulic analysis demonstrating that the cumulative effect of proposed development, when combined with all other existing and anticipated development will not increase the water surface elevation of the base flood by more than one foot in special flood hazard areas where the Federal Emergency Management Agency has provided base flood elevations but no floodway as required by Section 1137.04(i)(2).

E) A hydrologic and hydraulic engineering analysis showing impact of any development on flood heights in an identified floodway as required by Section 1337.04.(i)(1).

F) Generation of base flood elevation(s) for subdivision and large-scale developments as required by Section 1337.04(c).

(b) Exemption from Filing a Development Permit. An application for a development permit shall not be required for maintenance work such as roofing, painting and basement sealing, or for small development activities (except for filling and grading) valued at less than one thousand dollars ($1,000). Any proposed action exempt from filing for a Development Permit is also exempt from the standards of this ordinance.

(c) Designation of the Flood Damage Prevention Administrator. The Building Official is hereby appointed to administer and implement this chapter by granting or denying
development permit applications in accordance with its provisions.
(d) Duties and Responsibilities of the Building Official. Duties and responsibilities shall include, but are not limited to:

1. Permit review.

(e) Review and Approval of a Floodplain Development Permit Application. 
A. Review all development permits to determine that the permit requirements of this chapter have been satisfied. Review.

(A) After receipt of a complete application, the Floodplain Administrator shall review the application to ensure that the standards of these regulations have been met. No floodplain development permit application shall be reviewed until all information required in Section 1337.03(d) has been received by the Floodplain Administrator.

(B) The Floodplain Administrator shall review all floodplain development permits applications to assure that all necessary permits have been received from those Federal, State or local governmental agencies from which prior approval is required. The applicant shall be responsible for obtaining such permits as required including permits issued by the Department of the Army under Section 10 of the Rivers and Harbors Act and Section 404 of the Clean Water Act, and the Ohio Environmental Protection Agency under Section 401 of the Clean Water Act.

C. Review all development permits to determine if the proposed development is located within a designated floodway. Floodways are delineated in the Flood Boundary and Floodway Map or the Flood Insurance Rate Map of the Flood Insurance Study. Floodways may also be delineated in other sources of flood information. If the proposed development is located within a designated floodway, assure that the encroachment provision of Section 1337.05(c) is met.

(2) Approval. Within thirty (30) days after the receipt of a complete application, the Floodplain Administrator shall either approve or disapprove the application. If an application is approved, a floodplain development permit shall be issued. All floodplain development permits shall be conditional upon the commencement of work within one (1) year. A floodplain development permit shall expire one (1) year after issuance unless the permitted activity has been substantially begun and is thereafter pursued to completion.

(f) Inspections. The Floodplain Administrator shall make periodic inspections at appropriate times throughout the period of construction in order to monitor compliance with permit conditions.

(g) Post-Construction Certifications Required. The following as-built certifications are required after a floodplain development permit has been issued:

1. For new or substantially improved residential structures, or nonresidential structures that have been elevated, the applicant shall have a Federal Emergency Management Agency Elevation Certificate completed by a registered surveyor to record as-built elevation data. For elevated structures in Zone A and Zone AO areas without a base flood elevation, the elevation certificate may be completed by the property owner or owner’s representative.

2. For all development activities subject to the standards of Section 1337.03(j)(1), a Letter of Map Revision.

(h) Revoking a Floodplain Development Permit. A floodplain development permit shall be revocable, if among other things, the actual development activity does not conform to the terms of the application and permit granted thereon. In the event of the revocation of a permit, an appeal may be taken to the Appeals Board in accordance with Section 1337.05 of these
(i) Exemption from Filing a Development Permit. An application for a floodplain development permit shall not be required for:

1. Maintenance work such as roofing, painting, and basement sealing, or for small nonstructural development activities (except for filling and grading) valued at less than $5,000.
2. Development activities in an existing or proposed manufactured home park that are under the authority of the Ohio Department of Health and subject to the flood damage reduction provisions of the Ohio Administrative Code Section 3701.
3. Major utility facilities permitted by the Ohio Power Siting Board under Section 4906 of the Ohio Revised Code.
4. Hazardous waste disposal facilities permitted by the Hazardous Waste Siting Board under Section 3734 of the Ohio Revised Code.
5. Development activities undertaken by a federal agency and which are subject to Federal Executive Order 11988 – Floodplain Management.

Any proposed action exempt from filing for a floodplain development permit is also exempt from the standards of these regulations.

(j) Map Maintenance Activities. To meet National Flood Insurance Program minimum requirements to have flood data reviewed and approved by FEMA, and to ensure that City of Kent flood maps, studies and other data identified in Section 1337.01(f) accurately represent flooding conditions so appropriate floodplain management criteria are based on current data, the following map maintenance activities are identified:

1. Requirement to Submit New Technical Data
   A) For all development proposals that impact floodway delineations or base flood elevations, the community shall ensure that technical data reflecting such changes be submitted to FEMA within six months of the date such information becomes available. These development proposals include:
   1. Floodway encroachments that increase or decrease base flood elevations or alter floodway boundaries;
   2. Fill sites to be used for the placement of proposed structures where the applicant desires to remove the site from the special flood hazard area;
   3. Alteration of watercourses that result in a relocation or elimination of the special flood hazard area, including the placement of culverts; and
   4. Subdivision or large scale development proposals requiring the establishment of base flood elevations in accordance with Section 1337.4(c).
   B) It is the responsibility of the applicant to have technical data, required in accordance with Section 1337.03(j)(1), prepared in a format required for a Conditional Letter of Map Revision or Letter of Map Revision, and submitted to FEMA. Submittal and processing fees for these map revisions shall be the responsibility of the applicant.
   C) The Floodplain Administrator shall require a Conditional Letter of Map Revision prior to the issuance of a floodplain development permit for:
   1. Proposed floodway encroachments that increase the base flood elevation; and
   2. Proposed development which increases the base flood elevation by more than one foot in areas where FEMA has provided base flood elevations but no floodway.
   D) Floodplain development permits issued by the Floodplain Administrator shall be conditioned upon the applicant obtaining a Letter of Map Revision from FEMA for
Right to Submit New Technical Data. The Floodplain Administrator may request changes to any of the information shown on an effective map that does not impact floodplain or floodway delineations or base flood elevations, such as labeling or planimetric details. Such a submission shall include appropriate supporting documentation made in writing by the Mayor of the City of Kent, and may be submitted at any time.

Annexation / Detachment. Upon occurrence, the Floodplain Administrator shall notify FEMA in writing whenever the boundaries of the City of Kent have been modified by annexation or the community has assumed authority over an area, or no longer has authority to adopt and enforce floodplain management regulations for a particular area. In order that the City of Kent Flood Insurance Rate Map accurately represent the City of Kent boundaries, include within such notification a copy of a map of the City of Kent suitable for reproduction, clearly showing the new corporate limits or the new area for which the City of Kent has assumed or relinquished floodplain management regulatory authority.

Use of other base flood elevation and floodway data. Areas of special flood hazard where base flood elevation data have not been provided by the Federal Emergency Management Agency in accordance with Section 1337.03(b), Basis for Establishing the Areas of Special Flood Hazard, are designated as Zone A on the community’s Flood Insurance Rate Map. Within these areas, the Building Official shall obtain, review and reasonably utilize any base flood elevation and floodway data available from a federal, state, or other source, including data obtained under Section 1337.05(b)(6), Subdivisions and Large Developments, in order to administer Section 1337.05(b)(1), Specific Standards – Residential Construction; Section 1337.05(b)(2), Specific Standards – Non-residential Construction; and Section 1337.05(c), Floodways.

Information to be obtained and maintained. Where base flood elevation data are utilized within areas of special hazards on a community’s Flood Insurance Rate Map, regardless of the source of such data, the following provisions apply:

A. Obtain and record the actual elevation (in relation to mean sea level) of the lowest floor, including basement, of all new or substantially improved structures and record whether or not such structures contain an enclosure below the lowest floor.

B. For all new or substantially improved floodproofed nonresidential structures:
   1. Verify and record the actual elevation (in relation to mean sea level) to which the structure was floodproofed; and
   2. Maintain the floodproofing certifications required in Section 1337.04(a)(3).

C. Maintain for public inspection all records pertaining to the provisions of this chapter.

Alteration of watercourses:

A. Notify adjacent communities and the Ohio Department of Natural Resources, Division of Water, prior to any alteration or relocation of a watercourse and submit evidence of such notification to the Federal Emergency Management Agency. A watercourse is also considered to be altered if any change occurs within its banks.

B. Maintain engineering documentation required in Section 1337.04(a)(4) that the flood carrying capacity of the altered or relocated portion of said watercourse will not be diminished. Require that necessary maintenance will
be provided for by the applicant for the altered or relocated portion of such watercourse so that the flood carrying capacity will not be diminished.

(5) Interpretation of flood boundaries. Make interpretations, where needed as to the exact location of the boundaries of the areas of special flood hazards (for example, where there appears to be a conflict between a mapped boundary and actual field conditions). Where a map boundary and elevations disagree, the elevations delineated in the flood elevation profile shall prevail. The person contesting the location of the boundary shall be given a reasonable opportunity to appeal the interpretation as provided in Section 1337.04(e).

(k) Data Use and Flood Map Interpretation. The following guidelines shall apply to the use and interpretation of maps and other data showing areas of special flood hazard:

(1) In areas where FEMA has not identified special flood hazard areas, or in FEMA identified special flood hazard areas where base flood elevation and floodway data have not been identified, the Floodplain Administrator shall review and reasonably utilize any other flood hazard data available from a federal, state, or other source.

(2) Base flood elevations and floodway boundaries produced on FEMA flood maps and studies shall take precedence over base flood elevations and floodway boundaries by any other source that reflect a reduced floodway width and/or lower base flood elevations. Other sources of data, showing increased base flood elevations and/or larger floodway areas than are shown on FEMA flood maps and studies, shall be reasonably used by the Floodplain Administrator.

(3) When Preliminary Flood Insurance Rate Maps and/or Flood Insurance Study have been provided by FEMA:

A) Upon the issuance of a Letter of Final Determination by the FEMA, the preliminary flood hazard data shall be used and replace all previously existing flood hazard data provided from FEMA for the purposes of administering these regulations.

B) Prior to the issuance of a Letter of Final Determination by FEMA, the use of preliminary flood hazard data shall only be required where no base flood elevations and/or floodway areas exist or where the preliminary base flood elevations or floodway area exceed the base flood elevations and/or floodway widths in existing flood hazard data provided from FEMA. Such preliminary data may be subject to change and/or appeal to FEMA.

(4) The Floodplain Administrator shall make interpretations, where needed, as to the exact location of the flood boundaries and areas of special flood hazard. A person contesting the determination of the location of the boundary shall be given a reasonable opportunity to appeal the interpretation as provided in Section 1337.05, Appeals and Variances.

(5) Where a map boundary showing an area of special flood hazard and field elevations disagree, the base flood elevations or flood protection elevations (as found on an elevation profile, floodway data table, established high water marks, etc.) shall prevail.

(l) Substantial Damage Determinations. Damages to structures may result from a variety of causes including flood, tornado, wind, heavy snow, fire, etc. After such a damage event, the Floodplain Administrator shall:

(1) Determine whether damaged structures are located in special flood hazard areas;

(2) Conduct substantial damage determinations for damaged structures located in special flood hazard areas; and

(3) Make reasonable attempt to notify owners of substantially damaged structures of the need to obtain a floodplain development permit prior to repair, rehabilitation, or reconstruction.
Additionally, the Floodplain Administrator may implement other measures to assist with the substantial damage determination and subsequent repair process. These measures include issuing press releases, public service announcements, and other public information materials related to the floodplain development permits and repair of damaged structures; coordinating with other federal, state, and local agencies to assist with substantial damage determinations; providing owners of damaged structures materials and other information related to the proper repair of damaged structures in special flood hazard areas; and assist owners of substantially damaged structures with Increased Cost of Compliance insurance claims.

(e) Variance Procedure.

(1) Appeal Board.

A. The Board of Building Appeals as established by the City shall hear and decide appeals and requests for variances from the requirements of this chapter.

B. The Board of Building Appeals shall hear and decide appeals when it is alleged there is an error in any requirement, decision or determination made by the Building Official in the enforcement or administration of this chapter.

C. Those aggrieved by the decision of the Board of Building Appeals or any taxpayer, may appeal such decision to the Portage County Court of Common Pleas, as provided in Ohio R.C. Chapter 2506.

D. In passing upon such applications, the Board of Building Appeals shall consider all technical evaluations, all relevant factors, standards specified in other sections of this chapter, and:

   1. The danger that materials may be swept onto other lands to the injury of others;

   2. The danger to life and property due to flooding or erosion damage;

   3. The susceptibility of the proposed facility and its contents to flood damage and the effect of such damage on the individual owner;

   4. The importance of the services provided by the proposed facility to the community;

   5. The availability of alternative locations for the proposed use which are not subject to flooding or erosion damage;

   6. The necessity to the facility of a waterfront location, where applicable;

   7. The compatibility of the proposed use with existing and anticipated development;

   8. The relationship of the proposed use to the comprehensive plan and flood plain management program for that area;

   9. The safety of access to the property in times of flood for ordinary and emergency vehicles;

   10. The expected heights, velocity, duration, rate of rise and sediment transport of the floodwaters and the effects of wave action, if applicable, expected at the site; and

   11. The costs of providing governmental services during and after flood conditions, including maintenance and repair of public utilities and facilities such as sewer, gas, electrical and water systems and streets and bridges.

E. Upon consideration of the factors of subsection (e)(1) hereof and the purposes of this chapter, the Board of Building Appeals may attach such conditions to the granting of variances as it deems necessary.
necessary to further the purposes of this chapter. The Building
Official shall maintain records of all appeal actions and report any
variances to the Federal Emergency Management Agency upon
request.

(2) Conditions for variances:

A. Generally, variances may be issued for new construction and
substantial improvements to be erected on a lot of one-half acre or
less in size contiguous to and surrounded by lots with existing
structures constructed below the base flood level, providing items
1 to 11 in subsection (e)(1)D hereof have been fully considered. As
the lot size increases beyond the one-half acre, the technical
justification required for issuing the variance increases.

B. Variances may be issued for the repair or rehabilitation of historic
structures upon a determination that the proposed repair or
rehabilitation will not preclude the structure's continued
designation as a historic structure and the variance is the minimum
necessary to preserve the historic character and design of the
structure.

C. Variances shall not be issued within any designated floodway if
any increase in flood levels during the base flood discharge would
result.

D. Variances shall only be issued upon a determination that the
variance is the minimum necessary, considering the flood hazard,
to afford relief.

E. Variances shall only be issued upon:

1. A showing of good and sufficient cause;
2. A determination that failure to grant the variance would
result in exceptional hardship to the applicant; and
3. A determination that the granting of a variance will not
result in increased flood heights beyond that which is
allowed in this chapter, additional threats to public safety,
extraordinary public expense, create nuisances, cause fraud
or victimization of the public as identified in subsection
(e)(1)D hereof or conflict with existing local laws or
ordinances.

F. Any applicant to whom a variance is granted shall be given written
notice that the structure will be permitted to be built with a lowest floor
elevation below the base flood elevation and that the cost of flood insurance
will be commensurate with the increased risk resulting from the reduced
lowest floor elevation. (Ord. 1998-03. Passed 1-21-98)

1337.05.04 PROVISIONS USE AND DEVELOPMENT STANDARDS FOR FLOOD
HAZARD REDUCTION.

(a) General Standards. In all areas of special flood hazards the following standards
are required:

1. Anchoring. All new construction and substantial improvements shall be
anchored to prevent flotation, collapse or lateral movement of the structure
resulting from hydrodynamic and hydrostatic loads, including the effects of
buoyancy.

B. All manufactured homes not otherwise regulated by the Ohio Revised Code pertaining to manufactured home parks shall be anchored to prevent flotation, collapse or lateral movement of the structure resulting from hydrodynamic and hydrostatic loads, including the effects of buoyancy. Methods of anchoring may include but are not to be limited to, use of over-the-top or frame ties to ground anchors.

(2) Construction materials and methods.

A. All new construction and substantial improvements shall be constructed with materials resistant to flood damage.

B. All new construction and substantial improvements shall be constructed using methods and practices that minimize flood damage.

C. All new construction and substantial improvements shall be constructed with electrical heating, ventilation, plumbing and air conditioning equipment and other service facilities that are designed and/or located so as to prevent water from entering or accumulating within the components during conditions of flooding.

(3) Utilities.

A. All new and replacement water supply systems shall be designed to minimize or eliminate infiltration of flood waters into the systems;

B. New and replacement sanitary sewerage systems shall be designed to minimize or eliminate infiltration of flood waters into the systems and discharge from the systems into flood waters; and

C. On site waste disposal systems shall be located to avoid impairment to them or contamination from them during flooding.

(4) Subdivision proposals.

A. All subdivision proposals, including manufactured home subdivisions shall be consistent with the need to minimize flood damage;

B. All subdivision proposals, including manufactured home subdivisions shall have public utilities and facilities such as sewer, gas, electrical and water systems located and constructed to minimize flood damage;

C. All subdivision proposals, including manufactured home subdivisions, shall meet the specific standards of Section 1337.05(b)(6), Subdivisions and Large Developments.

(5) Standards in Areas of Special Flood Hazard without Base Flood Elevation Data. In all areas of special flood hazard identified as Zone A on the Flood Insurance Rate Map where base flood elevation data are not available from any source, the following provisions apply:

A. New construction and substantial improvement of any residential, commercial, industrial, or other nonresidential structure shall have the lowest floor, including basements, elevated to at least two feet above the highest adjacent natural grade.

(b) Specific Standards. In all areas of special flood hazard where base flood elevation data have been provided as set forth in Section 1337.03(b), Basis for Establishing the Areas of Special Flood Hazard; 1337.04(d)(2), Use of Other Base Flood Elevation and Floodway Data; or, 1337.05(b)(6), Subdivisions and Large Developments, the following provisions are required:

(1) Residential construction. New construction and substantial improvement of any residential structure shall have the lowest floor, including basement, elevated to or above the base flood elevation.
Nonresidential construction. New construction and substantial improvement of any residential structure shall have the lowest floor, including basement, elevated to or above the base flood elevation; or together with attendant utility and sanitary facilities shall:

A. Be floodproofed so that the structure is watertight with walls substantially impermeable to the passage of water to the level of the base flood elevation. In order to be eligible for lower flood insurance rates, the structure should be floodproofed at least one foot above the base flood elevation.

B. Have structural components capable of resisting hydrostatic and hydrodynamic loads and effects of buoyancy; and

C. Be certified by a registered professional engineer or architect that the design and methods of construction are in accordance with accepted standards of practice for meeting the standards of this subsection. Such certification shall be provided to the official as set forth in Section 1337.04(a)(3).

Accessory structures. An exemption to the elevation or dry floodproofing standards may be granted for accessory structures (e.g. sheds, detached garages) containing 576 square feet or less in gross floor area. Such structures must meet the encroachment provisions of subsection (c) hereof and the following additional standards:

A. They shall not be used for human habitation;

B. They shall be designed to have low flood damage potential;

C. They shall be constructed and placed on the building site so as to offer the minimum resistance to the flow of flood waters;

D. They shall be firmly anchored to prevent flotation; and

E. Service facilities such as electrical and heating equipment shall be elevated or floodproofed.

Manufactured homes and recreational vehicles. The following standards shall apply to all new and substantially improved manufactured homes not subject to the manufactured home requirements of Ohio R.C. 3733.01:

A. Manufactured homes shall be anchored in accordance with subsection (a)(1)B hereof.

B. Manufactured homes shall be elevated on a permanent foundation such that the lowest floor of the manufactured home is at or above the base flood elevation.

Enclosures below the lowest floor. The following provisions apply to all new and substantially improved residential and nonresidential structures which are elevated to or above base flood elevation using pilings, columns or posts. Fully enclosed areas below the lowest floor that are usable solely for parking of vehicles, building access or storage in an area other than a basement and which are subject to flooding shall be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters. Designs for meeting this requirement must:

A. Be certified by a registered professional engineer or architect; or

B. Must meet or exceed the following criteria:

1. A minimum of two openings having a total net area of not less than one square inch for every square foot of enclosed area shall be provided;

2. The bottom of all openings shall be no higher than one foot above grade openings may be equipped with screens, louvers, valves,
Subdivisions and Large Developments. In all areas of special flood hazard where base flood elevation data have not been provided in accordance with Section 1337.03(b), Basis for Establishing the Area of Special Flood Hazard, or Section 1337.04(d)(2), Use of other Base Flood Elevation Data, the following standards apply to all subdivision proposals, including manufactured home subdivisions, and other proposed developments containing at least 50 lots or 5 acres (whichever is less):

A. The applicant shall provide base flood elevation data performed in accordance with standard engineering practices;

B. If Section 1337.05(b)(6)A is satisfied, all new construction and substantial improvements shall comply with all applicable flood hazard reduction provisions of Section 1337.05(a), General Standards, and Section 1337.05(b), Specific Standards.

Floodways. The Flood Insurance Study referenced in Section 1337.03(b) identifies a segment within areas of special flood hazard known as a floodway. Floodways may also be delineated in other sources of flood information as specified in Section 1337.04(d)(2). The floodway is an extremely hazardous area due to the velocity of flood waters which carry debris, potential projectiles and erosion potential. The following provisions apply within all delineated floodway areas:

1. Prohibit encroachments, including fill, new construction, substantial improvements, and other development unless a hydrologic and hydraulic analysis performed in accordance with standard engineering practices demonstrates that the proposed encroachment would not result in any increase in flood levels during the occurrence of the base flood discharge.

2. If subsection (c)(1) hereof is satisfied, all new construction and substantial improvements shall comply with all applicable flood hazard reduction provisions of section 1337.05(b), Specific Standards.

3. Any encroachment within the floodway that would result in an increase in base flood elevations can only be granted upon the prior approval by the Federal Emergency Management Agency. Such requests must be submitted by the Building Official to the Federal Emergency Management Agency and must meet the requirements of the National Flood Insurance Program.

The following use and development standards apply to development wholly within, partially within, or in contact with any special flood hazard area as established in Section 1337.01(f) or 1337.03(k)(1):

(a) Use Regulations

1. Permitted Uses All uses not otherwise prohibited in this section or any other applicable land use regulation adopted by City of Kent are allowed provided they meet the provisions of these regulations.

2. Prohibited Uses

   A) Private water supply systems in all special flood hazard areas identified by FEMA, permitted under Section 3701 of the Ohio Revised Code.

   B) Infectious waste treatment facilities in all special flood hazard areas, permitted under Section 3734 of the Ohio Revised Code.

(b) Water and Wastewater Systems. The following standards apply to all water supply, sanitary sewerage and waste disposal systems not otherwise regulated by the Ohio Revised Code:
(1) All new and replacement water supply systems shall be designed to minimize or eliminate infiltration of floodwaters into the systems;
(2) New and replacement sanitary sewerage systems shall be designed to minimize or eliminate infiltration of flood waters into the systems and discharge from the systems into flood waters; and,
(3) On-site waste disposal systems shall be located to avoid impairment to or contamination from them during flooding.

(c) Subdivisions and Large Developments (50 lots or 5 acres, whichever is less).

(1) All subdivision proposals shall be consistent with the need to minimize flood damage and are subject to all applicable standards in these regulations;
(2) All subdivision proposals shall have public utilities and facilities such as sewer, gas, electrical, and water systems located and constructed to minimize flood damage;
(3) All subdivision proposals shall have adequate drainage provided to reduce exposure to flood damage; and
(4) In all areas of special flood hazard where base flood elevation data are not available, the applicant shall provide a hydrologic and hydraulic engineering analysis that generates base flood elevations for all subdivision proposals and other proposed developments containing at least 50 lots or 5 acres, whichever is less.

E. The applicant shall meet the requirement to submit technical data to FEMA in Section 1337.03(j)(1)A)4 when a hydrologic and hydraulic analysis is completed that generates base flood elevations as required by Section 1337.04(c)(4).

(d) Residential Structures.

(1) New construction and substantial improvements shall be anchored to prevent flotation, collapse, or lateral movement of the structure resulting from hydrodynamic and hydrostatic loads, including the effects of buoyancy. Where a structure, including its foundation members, is elevated on fill to or above the base flood elevation, the requirements for anchoring (1337.04(d)(1)) and construction materials resistant to flood damage (1337.04(d)(2)) are satisfied;
(2) New construction and substantial improvements shall be constructed with methods and materials resistant to flood damage;
(3) New construction and substantial improvements shall be constructed with electrical, heating, ventilation, plumbing and air conditioning equipment and other service facilities that are designed and/or elevated so as to prevent water from entering or accumulating within the components during conditions of flooding.
(4) New construction and substantial improvement of any residential structure, including manufactured homes, shall have the lowest floor, including basement, elevated to or above the flood protection elevation. Where flood protection elevation data are not available, the structure shall have the lowest floor, including basement, elevated at least two feet above the highest adjacent natural grade.
(5) New construction and substantial improvements, including manufactured homes, that do not have basements and that are elevated to the flood protection elevation using pilings, columns, posts, or solid foundation perimeter walls with openings sufficient to allow unimpeded movement of flood waters may have an enclosure below the lowest floor provided the enclosure meets the following standards:
A) Be used only for the parking of vehicles, building access, or storage; and
B) be designed and certified by a registered professional engineer or architect to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters; or
C) have a minimum of two openings on different walls having a total net area not less than one square inch for every square foot of enclosed area, and the bottom of all such openings being no higher than one foot above grade. The openings may be equipped with screens, louvers, or other coverings or devices provided that they permit the automatic entry and exit of floodwaters.

(6) Manufactured homes shall be affixed to a permanent foundation and anchored to prevent flotation, collapse or lateral movement of the structure resulting from hydrodynamic and hydrostatic loads, including the effects of buoyancy. Methods of anchoring may include, but are not limited to, use of over-the-top or frame ties to ground anchors.

(7) Repair or rehabilitation of historic structures upon a determination that the proposed repair or rehabilitation will not preclude the structure's continued designation as a historic structure and is the minimum necessary to preserve the historic character and design of the structure, shall be exempt from the development standards of Section 1337.04.(d).

(8) In AO Zones, new construction and substantial improvement shall have adequate drainage paths around structures on slopes to guide floodwaters around and away from the structure.

(e) Nonresidential Structures

(1) New construction and substantial improvement of any commercial, industrial or other nonresidential structure shall meet the requirements of Section 1337.04(d)(1) – (3) and (5) – (8).

(2) New construction and substantial improvement of any commercial, industrial or other non-residential structure shall either have the lowest floor, including basement, elevated to or above the level of the flood protection elevation; or, together with attendant utility and sanitary facilities, shall meet all of the following standards:

A) Be dry floodproofed so that the structure is watertight with walls substantially impermeable to the passage of water to the level of the flood protection elevation;
B) Have structural components capable of resisting hydrostatic and hydrodynamic loads and effects of buoyancy; and,
C) Be certified by a registered professional engineer or architect, through the use of a Federal Emergency Management Agency Floodproofing Certificate, that the design and methods of construction are in accordance with Section 1337.04(e)(2)A) and B).

(3) Where flood protection elevation data are not available, the structure shall have the lowest floor, including basement, elevated at least two feet above the highest adjacent natural grade.

(f) Accessory Structures. Relief to the elevation or dry floodproofing standards may be granted for accessory structures containing no more than 600 square feet. Such structures must meet the following standards:

(1) They shall not be used for human habitation;
(2) They shall be constructed of flood resistant materials;
(3) They shall be constructed and placed on the lot to offer the minimum resistance to the flow of floodwaters;
(4) They shall be firmly anchored to prevent flotation;
(5) Service facilities such as electrical and heating equipment shall be elevated or floodproofed to or above the level of the flood protection elevation; and
(6) They shall meet the opening requirements of Section 1337.04(d)(5)C);

(g) Recreational Vehicles. Recreational vehicles must meet at least one of the following standards:
1. They shall not be located on sites in special flood hazard areas for more than 180 days, or
2. They must be fully licensed and ready for highway use, or
3. They must meet all standards of Section 1337.04(d).

(h) Above Ground Gas or Liquid Storage Tanks. All above ground gas or liquid storage tanks shall be anchored to prevent flotation or lateral movement resulting from hydrodynamic and hydrostatic loads.

(i) Assurance of Flood Carrying Capacity. Pursuant to the purpose and methods of reducing flood damage stated in these regulations, the following additional standards are adopted to assure that the reduction of the flood carrying capacity of watercourses is minimized:

(1) Development in Floodways
   A) In floodway areas, development shall cause no increase in flood levels during the occurrence of the base flood discharge. Prior to issuance of a floodplain development permit, the applicant must submit a hydrologic and hydraulic analysis, conducted by a registered professional engineer, demonstrating that the proposed development would not result in any increase in the base flood elevation; or
   B) Development in floodway areas causing increases in the base flood elevation may be permitted provided all of the following are completed by the applicant:
      1. Meet the requirements to submit technical data in Section 1337.03.(j)(1);
      2. An evaluation of alternatives, which would not result in increased base flood elevations and an explanation why these alternatives are not feasible;
      3. Certification that no structures are located in areas that would be impacted by the increased base flood elevation;
      4. Documentation of individual legal notices to all impacted property owners within and outside the community, explaining the impact of the proposed action on their property; and
      5. Concurrence of the Mayor City Manager of the City of Kent and the Chief Executive Officer of any other communities impacted by the proposed actions.

(2) Development in Riverine Areas with Base Flood Elevations but No Floodways
   A) In riverine special flood hazard areas identified by FEMA where base flood elevation data are provided but no floodways have been designated, the cumulative effect of any proposed development, when combined with all other existing and anticipated development, shall not increase the base flood elevation more than 1.0 (one) foot at any point. Prior to issuance of a floodplain development permit, the applicant must submit a hydrologic and hydraulic analysis, conducted by a registered professional engineer, demonstrating that this standard has been met; or,
   B) Development in riverine special flood hazard areas identified by FEMA where base flood elevation data are provided but no floodways have been designated causing more than one foot increase in the base flood elevation may be permitted provided all of the following are completed by the applicant:
      1. An evaluation of alternatives which would result in an increase of one foot or less of the base flood elevation and an explanation why these alternatives are not feasible;
      2. Section 1337.04.(i)(1)B), items (1) and (3)-(5).

(3) Alterations of a Watercourse. For the purpose of these regulations, a watercourse is
altered when any change occurs within its banks. The extent of the banks shall be established by a field determination of the “bankfull stage.” The field determination of “bankfull stage” shall be based on methods presented in Chapter 7 of the USDA Forest Service General Technical Report RM-245, Stream Channel Reference Sites: An Illustrated Guide to Field Technique or other applicable publication available from a Federal, State, or other authoritative source. For all proposed developments that alter a watercourse, the following standards apply:

A) The bankfull flood carrying capacity of the altered or relocated portion of the watercourse shall not be diminished. Prior to the issuance of a floodplain development permit, the applicant must submit a description of the extent to which any watercourse will be altered or relocated as a result of the proposed development, and certification by a registered professional engineer that the bankfull flood carrying capacity of the watercourse will not be diminished.

B) Adjacent communities, the U.S. Army Corps of Engineers, and the Ohio Department of Natural Resources, Division of Water, must be notified prior to any alteration or relocation of a watercourse. Evidence of such notification must be submitted to the Federal Emergency Management Agency.

C) The applicant shall be responsible for providing the necessary maintenance for the altered or relocated portion of said watercourse so that the flood carrying capacity will not be diminished. The Floodplain Administrator may require the permit holder to enter into an agreement with City of Kent specifying the maintenance responsibilities. If an agreement is required, it shall be made a condition of the floodplain development permit.

D) The applicant shall meet the requirements to submit technical data in Section 1337.03(j)(1)(A) when an alteration of a watercourse results in the relocation or elimination of the special flood hazard area, including the placement of culverts.

1337.05 APPEALS AND VARIANCES

(a) Appeals Board Established
   (1) The Kent Board of Building Appeals is hereby appointed to serve as the Appeals Board for these regulations as established by Chapter 1309 of the Kent Codified Ordinances.
   (2) Records of the Appeals Board shall be kept and filed in Service Administration Complex at 930 Overholt Road Kent, Ohio.

(b) Powers and Duties
   (1) The Appeals Board shall hear and decide appeals where it is alleged there is an error in any order, requirement, decision or determination made by the Floodplain Administrator in the administration or enforcement of these regulations.
   (2) Authorize variances in accordance with Section 1337.045(d) of these regulations.

(c) Appeals. Any person affected by any notice and order, or other official action of the Floodplain Administrator may request and shall be granted a hearing on the matter before the Appeals Board provided that such person shall file, within 30 days of the date of such notice and order, or other official action, a brief statement of the grounds for such hearing or for the mitigation of any item appearing on any order of the Floodplain Administrator’s decision. Such appeal shall be in writing, signed by the applicant, and be filed with the Floodplain Administrator. Upon receipt of the appeal, the Floodplain Administrator shall transmit said notice and all pertinent information on which the Floodplain Administrator’s decision was made
to the Appeals Board.

Upon receipt of the notice of appeal, the Appeals Board shall fix a reasonable time for the appeal, give notice in writing to parties in interest, and decide the appeal within a reasonable time after it is submitted.

(d) Variances. Any person believing that the use and development standards of these regulations would result in unnecessary hardship may file an application for a variance. The Appeals Board shall have the power to authorize, in specific cases, such variances from the standards of these regulations, not inconsistent with Federal regulations, as will not be contrary to the public interest where, owning to special conditions of the lot or parcel, a literal enforcement of the provisions of these regulations would result in unnecessary hardship.

(1) Application for a Variance
   A) Any owner, or agent thereof, of property for which a variance is sought shall make an application for a variance by filing it with the Floodplain Administrator, who upon receipt of the variance shall transmit it to the Appeals Board.
   B) Such application at a minimum shall contain the following information: Name, address, and telephone number of the applicant; legal description of the property; parcel map; description of the existing use; description of the proposed use; location of the floodplain; description of the variance sought; and reason for the variance request.

(2) Public Hearing. At such hearing the applicant shall present such statements and evidence as the Appeals Board requires. In considering such variance applications, the Appeals Board shall consider and make findings of fact on all evaluations, all relevant factors, standards specified in other sections of these regulations and the following factors:

A) The danger that materials may be swept onto other lands to the injury of others.
B) The danger to life and property due to flooding or erosion damage.
C) The susceptibility of the proposed facility and its contents to flood damage and the effect of such damage on the individual owner.
D) The importance of the services provided by the proposed facility to the community.
E) The availability of alternative locations for the proposed use that are not subject to flooding or erosion damage.
F) The necessity to the facility of a waterfront location, where applicable.
G) The compatibility of the proposed use with existing and anticipated development.
H) The relationship of the proposed use to the comprehensive plan and floodplain management program for that area.
I) The safety of access to the property in times of flood for ordinary and emergency vehicles.
J) The expected heights, velocity, duration, rate of rise, and sediment transport of the floodwaters and the effects of wave action, if applicable, expected at the site.
K) The costs of providing governmental services during and after flood conditions, including maintenance and repair of public utilities and facilities such as sewer, gas, electrical, and water systems, and streets and bridges.

Variances shall only be issued upon:

A) A showing of good and sufficient cause.
B) A determination that failure to grant the variance would result in exceptional
hardship due to the physical characteristics of the property. Increased cost or inconvenience of meeting the requirements of these regulations does not constitute an exceptional hardship to the applicant.

C) A determination that the granting of a variance will not result in increased flood heights beyond that which is allowed in these regulations; additional threats to public safety: extraordinary public expense, nuisances, fraud on or victimization of the public, or conflict with existing local laws.

D) A determination that the structure or other development is protected by methods to minimize flood damages.

E) A determination that the variance is the minimum necessary, considering the flood hazard, to afford relief.

Upon consideration of the above factors and the purposes of these regulations, the Appeals Board may attach such conditions to the granting of variances, as it deems necessary to further the purposes of these regulations.

(3) Other Conditions for Variances
   A) Variances shall not be issued within any designated floodway if any increase in flood levels during the base flood discharge would result.

   B) Generally, variances may be issued for new construction and substantial improvements to be erected on a lot of one-half acre or less in size contiguous to and surrounded by lots with existing structures constructed below the base flood level, providing items in Section 1337.05(d)(2)A) to K) have been fully considered. As the lot size increases beyond one-half acre, the technical justification required for issuing the variance increases.

   C) Any applicant to whom a variance is granted shall be given written notice that the structure will be permitted to be built with a lowest floor elevation below the base flood elevation and the cost of flood insurance will be commensurate with the increased risk resulting from the reduced lowest floor elevation.

(e) Procedure at Hearings
   (1) All testimony shall be given under oath.

   (2) A complete record of the proceedings shall be kept, except confidential deliberations of the Board, but including all documents presented and a verbatim record of the testimony of all witnesses.

   (3) The applicant shall proceed first to present evidence and testimony in support of the appeal or variance.

   (4) The administrator may present evidence or testimony in opposition to the appeal or variance.

   (5) All witnesses shall be subject to cross-examination by the adverse party or their counsel.

   (6) Evidence that is not admitted may be proffered and shall become part of the record for appeal.

   (7) The Board shall issue subpoenas upon written request for the attendance of witnesses. A reasonable deposit to cover the cost of issuance and service shall be collected in advance.

   (8) The Board shall prepare conclusions of fact supporting its decision. The decision may be announced at the conclusion of the hearing and thereafter issued in writing or the decision may be issued in writing within a reasonable time after the hearing.

(f) Appeal to the Court. Those aggrieved by the decision of the Appeals Board may appeal such
1337.99. PENALTY 06. ENFORCEMENT

A violation of any provision of this chapter or failure to comply with any of its requirements shall constitute a misdemeanor of the fourth degree. Any person who violates this chapter or fails to comply with any of its requirements (including violations of conditions and safeguards established in connection with conditions) shall upon conviction thereof be fined or imprisoned as provided by the laws of the City of Kent, Section 501.99. Each day such violation continues shall be considered a separate offense. Nothing herein contained shall prevent the City from taking such other lawful action as is necessary to prevent or remedy any violations. The City of Kent shall prosecute any violation of this ordinance in accordance with the penalties stated herein.

(a) Compliance Required

(1) No structure or land shall hereafter be located, erected, constructed, reconstructed, repaired, extended, converted, enlarged or altered without full compliance with the terms of these regulations and all other applicable regulations which apply to uses within the jurisdiction of these regulations, unless specifically exempted from filing for a development permit as stated in Section 1337.03(i).

(2) Failure to obtain a floodplain development permit shall be a violation of these regulations and shall be punishable in accordance with Section 1337.06(c).

(3) Floodplain development permits issued on the basis of plans and applications approved by the Floodplain Administrator authorize only the use, and arrangement, set forth in such approved plans and applications or amendments thereto. Use, arrangement, or construction contrary to that authorized shall be deemed a violation of these regulations and punishable in accordance with Section 1337.06(c).

(b) Notice of Violation. Whenever the Floodplain Administrator determines that there has been a violation of any provision of these regulations, he shall give notice of such violation to the person responsible therefore and order compliance with these regulations as hereinafter provided. Such notice and order shall:

(1) Be put in writing on an appropriate form;

(2) Include a list of violations, referring to the section or sections of these regulations that have been violated, and order remedial action, which, if taken, will effect compliance with the provisions of these regulations;

(3) Specify a reasonable time for performance;

(4) Advise the owner, operator, or occupant of the right to appeal;

(5) Be served on the owner, occupant, or agent in person. However, this notice and order shall be deemed to be properly served upon the owner, occupant, or agent if a copy thereof is sent by registered or certified mail to the person’s last known mailing address, residence, or place of business, and/or a copy is posted in a conspicuous place in or on the dwelling affected.

(c) Violations and Penalties. Violation of the provisions of these regulations or failure to comply with any of its requirements shall be deemed to be a strict liability offense, and shall constitute a fourth degree misdemeanor. Any person who violates these regulations or fails to comply with any of its requirements shall upon conviction thereof be fined or imprisoned as provided by the
laws of the City of Kent. Each day such violation continues shall be considered a separate offense. Nothing herein contained shall prevent the City of Kent from taking such other lawful action as is necessary to prevent or remedy any violation. The City of Kent shall prosecute any violation of these regulations in accordance with the penalties stated herein.
